

# How to Change Your Password on iPhone

A step-by-step guide for iOS users

---

Your iPhone uses a passcode to keep it secure. You may also want to update your Apple Account (Apple ID) password for added security. This guide covers both.

## 1. Change Your iPhone Passcode

The passcode is the PIN or password you enter to unlock your iPhone screen.

**Step 1:** Open the **Settings** app on your iPhone (the grey gear icon).

**Step 2:** Scroll down and tap **Face ID & Passcode** (or **Touch ID & Passcode** on older models).

**Step 3:** Enter your **current passcode** when prompted.

**Step 4:** Scroll down and tap **Change Passcode**.

**Step 5:** Enter your **current passcode** again to confirm.

**Step 6:** Enter your **new passcode**. You can tap **Passcode Options** to choose between a 4-digit code, 6-digit code, or a custom alphanumeric password.

**Step 7:** **Re-enter** your new passcode to confirm it. Your passcode is now updated!

Tip: Choose a passcode that is easy for you to remember but hard for others to guess. Avoid simple sequences like 1234 or 0000.

## 2. Change Your Apple Account (Apple ID) Password

Your Apple ID password is used for the App Store, iCloud, and other Apple services.

**Step 1:** Open the **Settings** app.

**Step 2:** Tap your **name** at the very top of the Settings menu.

**Step 3:** Tap **Sign-In & Security**.

**Step 4:** Tap **Change Password**.

**Step 5:** If prompted, enter your iPhone's **passcode**.

**Step 6:** Enter your **new password**, then enter it again in the **Verify** field to confirm.

**Step 7:** Tap **Change** in the top-right corner. Your Apple ID password is now changed.

Note: Your Apple ID password must be at least 8 characters long and include uppercase and lowercase letters and at least one number.

### 3. Tips for a Strong Password

- Use at least 12 characters mixing letters, numbers, and symbols.
- Avoid using your name, birthday, or common words.
- Use a unique password — don't reuse passwords from other accounts.
- Consider using a password manager to store your passwords securely.
- Enable two-factor authentication on your Apple ID for extra protection.
